4VA	MINI driving modes					0	Switch on the lower shifting connection link enables three different driving modes to be selected: SPORT, MID and GREEN with correspondingly different effects on mood lighting, accelerator pedal characteristic, steering, with matching displays on the radio display or on the screen. In Sport mode accelerator pedal characteristic and steering (and also the shift times in vehicle with automatic transmission) evince a sporty setup. With screen radio there are sports instruments with display of power and torque as well as a vehicle check control. In Green mode the driver is assisted in maintaining a consumption-optimised style of driving: by smart control of energy and climate management and systems and displays, such as e.g. the gearshift display. The MINIMALISM Analyser supports and motivates the driver additionally in maintaining a consumption-optimised style of driving (consumption savings up to 20% are possible). Coasting in neutral with automatic transmission. Contains central instrument with LED ring

544	Cruise control with braking function	X	X	O	X	X	0	Cruise control from approx. 30 km/h, also for hill descents by additional braking intervention. Functions: - active braking intervention: if engine drag torque is not enough to maintain a preset speed on overrun, controlled braking intervention helps to reduce speed automatically - Speed limiter (LIM): A specific max. speed can be set manually, but it remains necessary for the driver to provide acceleration. When the specified speed is reached, it is possible to feel resistance from the accelerator, which can only be deactivated by completely pushing down the accelerator or by switching off the speed limit function. - Curve Speed Limiter (CSL): during controlled cornering, speed in the longitudinal direction is reduced if necessary as a function of measured lateral acceleration. The vehicle accelerates back up to desired speed as it exits the corner. - Comfort Dynamic System (CDS): "manual accelerator mode", as it is known, enables the driver to accelerate and reduce speed steadily in two dynamic stages by means of a control on the steering wheel. The desired speed is thus reached more rapidly and the driver can accelerate or slow the vehicle in the flow of traffic without having to estimate the target speed in advance Please note: The scopes of the system contained in the option code only provide assistance within defined system limits. It remains the responsibility of the respective driver to react to the actual traffic situation.
